July 2007

First there were the tabletop picture frames that let you slide a media card into the back and display images from vacation or your son's first birthday.

Now think bigger, much bigger, with the Cirgon MediaFrame 100. According to the company, it's the world's first system for easily managing all of your digital photos and music without the need for a PC or a Mac.

The MediaFrame 100 is a framed 19-inch, wall-hanging LCD display with embedded features that enable you to sort, manage and edit your digital photos. Plus, you can combine them with music to create slide shows to share with friends and family.

Best of all, Cirgon's products require no personal computer. Just plug your digital camera or memory card reader directly into the frame, copy the images onto the system, sit back on your sofa, and use the Cirgon remote control to sort your memories.

It's unlikely you'll run out of space. The unit will hold up to 10,000 photographs, plus music, video and other digital media.

All the product's features are accessed via a simple remote control.

The Cirgon MediaFrame 100 hangs on your wall as a piece of fine art, with a choice of black, gold or silver frame. It also can be ordered without a frame if you want to add your own to match your decor. Any 16-by-20-inch frame can be used.

The product is available for \$1,995 through the company's Web site, [www.cirgon.com](http://www.cirgon.com)
